

Rapido Mini-Case Study (Practice Questions)

Dataset:  Rapido

1. Calculate the **total distance traveled by each user** and return only those users who traveled more than 20 km in total, sorted by user_id

user_id ▾	total_distance ▾
4	20.76
5	24.83
8	26.24
14	23.01
27	25.51
37	20.49
40	42.12
46	28.72
65	22.37
69	37.65
75	39.55

2. Calculate the **average distance per ride for each vehicle type** and return only the vehicle types where the average distance is greater than 8 km.

vehicle_type ▾	avg_distance ▾
Cab AC	8.09
auto	8.6

3. Find all users who have **more than two rides** and display the total number of rides per user, sorted by user_id

user_id ▾	total_rides ▾
5	3
8	3
37	3
40	4
46	3
69	4
75	4

4. List all users who **have never taken a ride**, sorted by user_id (Hint: total 53 users)

user_id ▾	first_name ▾
3	Rajesh
7	Shruti
11	Ritika
12	Sunil
17	Neha
20	Sneha
30	Pooja
33	Rajesh
38	Arjun

results per page: 50 ▾ 1 – 50 of 53 |< .

5. Identify all the user(s) who signed up on the **earliest signup date**. How many such users are there?

user_id ▾	first_name ▾	last_name ▾	email ▾	signup_date ▾	origin_city ▾
42	Vinay	Joshi	vinay.joshi42@example.com	2024-07-27	Surat

6. Find users who **took at least one ride longer than 10 km**. How many such users are there? (Total 27 users)

user_id ▾
2
4
5
6

results per page: 50 ▾ 1 – 27 of 27

7. Count the number of rides in **Cab AC and Cab Non AC**, but only include rides **longer than the average distance** of all rides.

cab_ac_count ▼	cab_non_ac_count ▼
9	14

8. Create a combined list of **all unique start_locations** from **Rides** and all **unique end_location** values from **Rides** in 1 column, name it as **location** (Total 22 locations)

location ▼	
Domlur	
Rajajinagar	
Bellandur	
Electronic City	
Indiranagar	
MG Road	
Ulsoor Lake	

s per page: 50 ▼ 1 – 22 of 22

9. Calculate each user's **total rides** and **total distance**, and return only the users whose total distance is greater than the **average total distance of all users**, sorted by **user_id** (Total 25 rows)

user_id ▼	total_rides ▼	total_distance ▼
4	2	20.76
5	3	24.83
8	3	26.24
9	1	12.82
14	2	23.01
18	2	14.83
21	2	13.47

Results per page: 50 ▼ 1 – 25 of 25

10. Find each user's **average ride distance**, categorize them as **Low (<8 km)**, **Medium (8-12 km)**, **High (>12 km)**, and count the number of users in each category, sorted by **user_count** in descending order

distance_category ▼	user_count ▼
Low	33
Medium	25
High	7

11. Find rides whose **distance is greater than the average distance per vehicle type**, sorted by user_id and ride_id (Total 49 rows)

user_id ▼	ride_id ▼
1	2
2	61
4	18
5	66
5	100
6	55
8	13
8	91
9	82

Results per page: 50 ▼ 1 – 49 of 49

12. Find the **percentage of rides out of total** that had a captain rating = 0

captain_zero_percentage ▼
29.81

13. Find the users **who signed up in April 2025** but have **not taken any rides**, sorted by user_id (Hint use between to filter on dates, can directly use string values)

user_id ▾	first_name ▾	last_name ▾
38	Arjun	Menon
86	Aditya	Jain
103	null	null
111	Neha	Verma
113	Akash	Jain

Results per page: 50 ▾ 1 – 5 of 5 |< < > >

14. Find the **average distance** travelled by users **who signed up in May 2025** (Hint use between to filter on dates, can directly use string values)

avg_distance ▾
5.1

15. Identify the **user(s)** who have travelled in the **maximum number of different vehicle types**

user_id ▾	vehicle_type_count ▾
69	4
